

The Bureau of Lectures presents

Laser Science

Back by popular demand, last year's most popular show, Laser Science. The presenter will teach the students concepts such as persistence of vision, momentum, and inertia. Also, more complicated subjects such as energy conversion and stimulated emission will be presented to audiences of all ages. Then comes the fun part! A professionally choreographed music and laser display caps off the assembly, bringing the concepts together with the "oohs" and "ahhs" of students and staff alike.

*"My daughter (age 8) said it was the best assembly she had ever seen and my son (age 12) actually admitted that he enjoyed it too! Quite a feat! Thank you."
- Sharon Illanes, PTA, Olney, MD*

*"The entire audience, comprised of pre-k through 6th grade, faculty, staff, and community officials were mesmerized. I have already recommended this program to my fellow principals. Again, an outstanding program, thank you for the opportunity."
- Gerald Benjamin, Principal, Avon, NY*

*"This show was AWESOME! The presenter was phenomenal. All of our staff and students thoroughly enjoyed the show and I would recommend this show in a heartbeat. Well worth the \$\$!
- Lori Fafard, Principal, Uxbridge, MA*
